Summary

Senior Software Engineer with 7 years of experience building high-performance backend systems and distributed architectures. Specialized in Go and TypeScript, with hands-on experience designing microservices, event-driven pipelines, and scalable database systems taking complex features from design to production. Comfortable working across the full stack when needed.

Skills

Languages:

Go (Golang), TypeScript, Node.js, JavaScript

System Architecture:

Microservices, Distributed Systems, Event-Driven Architecture, Micro-Frontends

Frameworks & UI:

Gin, React, Next.js, Tailwind CSS

API & Protocols & Security:

gRPC, RESTful APIs, Websockets, JWT, Symmetric/Asymmetric Cryptography, Key Management (HMAC/RSA), RBAC

ORMs & Data Tools:

Gorm, Prisma, Sequelize

Databases & Storage

PostgreSQL, MySQL, MongoDB, Redis, ETCD, Amazon S3, minio

Message Brokers:

Apache Kafka, RabbitMQ

Utilities:

Docker, Git

Experience

Quickbill Indonesia

South Jakarta, Indonesia

Senior Full-Stack Software Engineer

December 2025 - June 2026

- Designed a fault-tolerant RabbitMQ reconnect mechanism tailored to the service's architecture, ensuring zero message loss during network or broker failures.
- Proposed and implemented a centralized shared-model library pattern across independent microservices, eliminating data model redundancy and reducing cross-team deployment blockers.
- Designed and owned an RBAC database schema end-to-end, including custom middleware and interceptors managing platform-wide user permissions from proposal to production deployment.
- Built an asynchronous bulk invoice processing engine with multi-row validation, real-time duplicate detection against production databases, and automated invoice number collision resolution.
- Built notification microservices for asynchronous email and WhatsApp delivery, ensuring reliable omnichannel communication across the platform.

Moladin

Central Jakarta, Indonesia

Full-Stack Software Engineer

January 2022 - December 2025

- Contributed to building a CRM supporting thousands of agents across manpower and cash loan workflows.
- Contributed to designing and deploying asynchronous microservices in Node.js and TypeScript, covering core business domains from loan origination to disbursement.
- Built and owned a centralized Credit Underwriting Service integrating third-party financial APIs for SLIK credit checking and contract validation.
- Used Kafka to orchestrate event publishing and consumption across distributed microservices, ensuring data consistency and reliable asynchronous processing.
- Built a high performance Calculator Service for complex financial logic, dynamic loan amounts, and interest due-date generation.

- Contributed to implementing modular micro-frontend architectures using React for scalable UI decoupling.
- Mentored frontend engineers transitioning into full-stack roles, covering backend concepts, API development, database management.

vOffice Indonesia
Mid-Senior Software Developer

South Jakarta, Indonesia
April 2021 - December 2021

- Managed engineering project timelines and delivery milestones, aligning technical execution with stakeholder requirements.
- Built data aggregation pipelines to analyze large client datasets, delivering business reports to the Board of Directors.
- Contributed to migrating legacy monolithic systems into a microservices architecture, improving application modularity and fault tolerance.
- Standardized repository structures and code organization patterns across the team, improving development velocity and maintainability.

vOffice Indonesia
Full-Stack Developer

South Jakarta, Indonesia
December 2019 - April 2021

- Built and deployed cross-platform mobile applications using React Native for iOS and Android, including the underlying RESTful APIs.
- Architected and developed an internal ERP platform centralizing operations across multiple branches, covering client onboarding, bookings, invoicing, accounting, and financial reporting.

PT. Integrated Synergy Systems
Backend Engineer

West Jakarta, Indonesia
May 2019 - December 2019

- Developed and delivered multiple web and mobile applications for external clients in a fast-paced agency environment.
- Engineered client-facing web applications using PHP, MySQL, and JavaScript, designing RESTful APIs for cross-platform integration.
- Designed and maintained internal enterprise web applications to streamline task management and automate operational reporting.

Coca-Cola Amatil
Web Developer (Freelance)

Cibitung, Indonesia
October 2018 - January 2019

- Designed and built a web-based ERP module to automate employee attendance tracking and shift logging.
- Managed attendance databases and engineered custom query logic to generate operational reports for management.

Education

SMK Telekomunikasi Telesandi
Computer Software Engineering

Vocational High School Degree
Bekasi, Indonesia • 2016 – 2019
